

# Leadership Behaviors That Drive

## PSM Excellence

Strong PSM performance starts  
with leadership behaviors.

Here are the most  
impactful actions leaders  
can take.

**AcuTech**

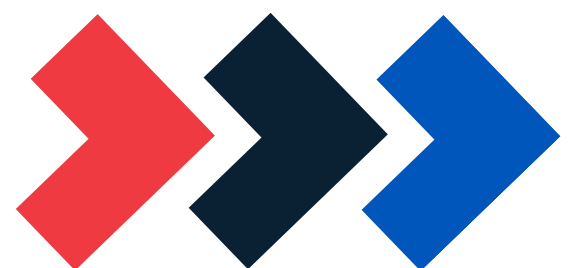

PROCESS RISK MANAGEMENT

# Be Visible in the Field

Ask barrier-focused questions.

See conditions firsthand.

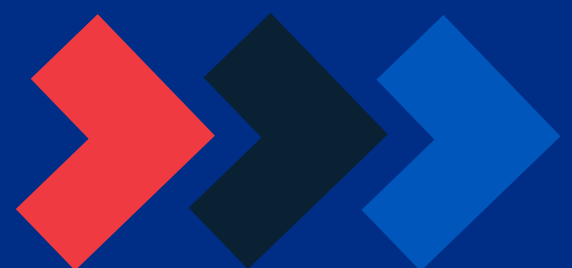

Understand the real challenges  
operators face.

# Treat MI/SIS Backlog Like Production Loss

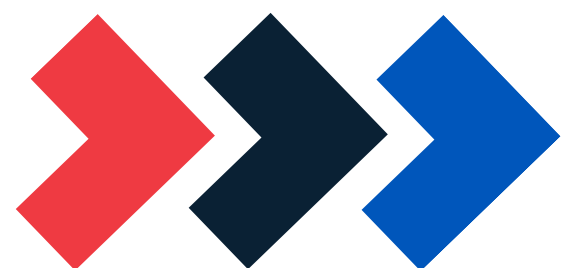

Maintenance items and safety instrumented system backlogs are safety-critical.

Prioritize and address them like lost production.

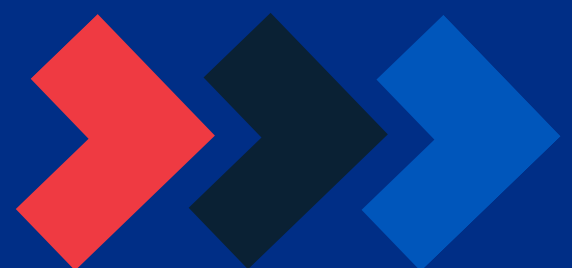

# Stop or Throttle Production if Barriers are Degraded or Impaired

When multiple barriers are compromised, slow down operations to prevent escalation and protect people, assets, and the environment.

# Celebrate Early Bad News

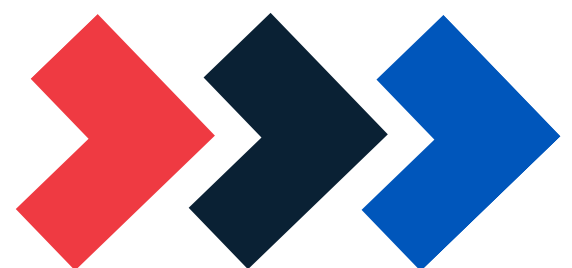

Encourage reporting and learning.  
Punish concealment, not  
messengers, to surface hazards  
before they grow.

# **Demand Systemic Root Cause Analysis**

Require thorough investigation of incidents and near misses.

Look for systemic issues, not just individual mistakes.

# How AcuTech Helps

AcuTech brings deep experience in safety culture transformation and process safety program implementation, including audits, safety culture assessments, and tailored leadership workshops that strengthen PSM leadership behaviors, barrier ownership, and executive alignment in high-hazard operations.
